707-777-4856

Registration for PD credit will be available mid-May 2017.

The purpose of this workshop is to help classroom teachers with new and innovative ways to advance science learning with students, through the use of various hands-on investigations and NASA content, working in teams toward a Mars mission. Teachers will also incorporate *SciGirls* strategies into existing lesson plans. If possible, participants should bring a laptop or iPad for online investigations.
